## **Decommissioning oil and gas fields: Best environmental practices**

Globally, many oil and gas fields are coming to the end of their field life and the infrastructure built to support production of these fields will need to be decommissioned when the decision to cease operation is made. As we work towards a low carbon future, producer countries will need to prioritize sustainable ways to decommission these facilities and infrastructure. Using case studies, discussions in the webinar will focus on:

- Key principles and steps in sustainable decommissioning
- Environmental regulatory and legal frameworks and institutions associated with decommissioning
- Environmental considerations associated with decommissioning and technologies
- Challenges, risks and opportunities related to offshore and onshore decommissioning

This webinar is organized by UNEP and Norway's Oil for Development Programme in collaboration with the International Association of Oil and Gas Producers (IOGP).

Participants will receive a Certificate of Participation upon completion of each webinar and short assessment!
